Project Manager with expertise in leading complex projects, driving product development, optimizing processes, and managing technical integrations. Skilled in collaborating with cross-functional teams, combining technical knowledge with strong organizational abilities to deliver results.

Experience

Colmex Pro	Project Manager
Jan 2026 – Today	Leading cross-functional projects from initiation to delivery, aligning stakeholders and priorities to meet timelines and business objectives. Restructuring and administering the company's project management tool, Monday.com, and building and maintaining a project management knowledge base to support clear requirements and effective communication.
marios.evripidou.me	Project Manager
Jun 2024 – Dec 2025	Led complex projects, drove product development, established and optimized processes, and managed technical integrations. Collaborated with cross-functional teams to gather and analyze requirements, assess priorities, and work with development teams on execution. Handled ad-hoc tasks to address unique client requirements.
PLUGIT	Project Manager
Oct 2020 – Feb 2023	Managed the development team's project lifecycle, including planning, execution, and release phases. Collaborated with account management, support, and sales teams to gather, refine, and prioritize product backlog requirements. Prepared all technical documentation, including product, API, and release notes, and supported project management for the design team to ensure effective prioritization and implementation.
PrimeXM	Head of Client Projects & Onboarding
Oct 2017 – Jan 2019	Developed and implemented the processes and procedures to ensure successful customer launches. Oversaw project management for all client projects. Led a cross-functional team responsible for the client onboarding process, including KYC, agreements, technical setups, training, and support.
Point Nine	Client Success Director – Project Manager / Business Analyst / Product Owner
Jan 2012 – Jun 2017	Handled the onboarding of Middle and Back-Office clients, including the required business analysis, product management, and project management. Prepared specifications and oversaw the implementation and testing of new features in the operations platform, serving as the main link between users, clients, and developers.
